How this appraisal was made

Ownership

We read every inscription held by this address from the Ordinals Wallet index. Only valid bitmaps count: the first "N.bitmap" inscribed for each block. Later copies of the same block number are not bitmaps and are excluded.

Traits

Each bitmap is classified by year and block-number rarity (sub-1K, 4- and 5-digit 2009) and by special traits: Patoshi blocks mined by Satoshi, pizza blocks, and punk-shaped blocks.

Pricing

Each bitmap is assigned to one tier, in this order: sub-1K, pizza, 2009 4-digit, 2009 5-digit, punks, then plain by year. It is priced at what that tier actually did on Satflow during the week shown: the top standing bid (what you could sell for now), recent sales, and the cheapest listing.

Limits

These are tier prices, not offers on your exact blocks. Where a tier has no reliable bid or ask, we use the plain tier for the block's year. Patoshi blocks outside sub-1K are flagged but not given a premium, because there are too few sales to price one. Prices move; check a live marketplace before you trade.
